

A scatter plot showing the Volcanic Explosivity Index (VEI) for various volcanoes. The x-axis is labeled 'VEI' and ranges from 0 to 7, with a 'NA' label at the far right. The y-axis is unlabeled. The data points are color-coded by region: red (0-1), orange (1-2), green (2-3), blue (3-5), purple (6), and grey (NA). The plot shows a high density of volcanoes with low VEI (0-1) and a few outliers with high VEI (3-5). The 'NA' category is represented by a single grey point at the far right.
